The 3-Minute Self-Test

Before you decide this is theoretical, try these 6 questions. **Time yourself. No calculator. Answer in your head.** Most field salespeople get 4 of 6 wrong.

Question 1 — The Discount Trap

A buyer wants **20% off** on a ₹2,000 order of Choco Chip (MRP ₹40, cost ₹28). You also have to give **5% scheme** on top. What is your **net margin %**?

- A) 25%
- B) 20%
- C) 11.4%
- D) 5%

Question 2 — The Free Units Illusion

"**10+1 free**" — what is the effective discount %?

- A) 10%
- B) 9%
- C) 9.09%
- D) 11%

Question 3 — The Scheme Stack

A buyer wants **10% off + 10+1 free + ₹200 display money** on a ₹2,000 order. What's the **total effective discount**?

- A) 10%
- B) 15%
- C) 19.09%
- D) 24.09%

Question 4 — The Slab Push

You're at ₹4,200 on an order. The next slab is ₹5,000 and gives **3% extra margin**. Is it worth pushing?

- A) Yes — always push to slab
- B) No — ₹800 gap is too much
- C) Depends on the margin gained vs. cost of pushing
- D) Can't tell

Question 5 — The Shelf Choice

One eye-level slot. Two options:

- **Choco Chip**: ₹12 margin/unit × 80 units/month = ₹960
- **Cashew Badam**: ₹16 margin/unit × 70 units/month = ₹1,120

Which SKU deserves the slot?

- A) Choco Chip (higher volume)
- B) Cashew Badam (higher margin per slot)
- C) Equal — doesn't matter
- D) Can't tell without more data

Question 6 — The Route Decision

Two stores:

- **Sharma Kirana**: ₹4,200 margin/month, 8 min travel
- **Ravi General**: ₹1,800 margin/month, 25 min travel

Which is worth visiting?

- A) Both equally
- B) Sharma Kirana
- C) Ravi General
- D) Neither

Score Yourself

Correct	Verdict
6/6	You're in the top 2% of field salespeople. You don't need this widget — but your team does.
4–5/6	You're typical. You'd save 1–2 hours/week and 2–3 margin points with the widget.
2–3/6	You're losing margin daily without knowing it. This is why the widget exists.
0–1/6	You're the reason ₹45,000/rep/month leaks. The widget would pay for itself in week one.

ANSWER KEY

Question	Correct Answer	What it tests
Q1 — Discount Trap (20% off + 5% scheme on ₹2,000 Choco Chip order)	**6.25% net margin** *(none of the listed options)*	Margin misunderstanding — the exact gap DealHub found in 80% of reps
Q2 — Free Units Illusion ("10+1 free" = what % off?)	**C) 9.09%**	Unit conversion error — most reps say 10%
Q3 — Scheme Stack (10% off + 10+1 free + ₹200 display on ₹2,000)	**D) 29.09%**	Total effective cost — reps forget to stack all three
Q4 — Slab Push (₹4,200 order, next slab ₹5,000, 3% extra margin)	**C) Depends on margin gained vs. cost of pushing**	Blind slab-chasing — the root cause of overstock

Question	Correct Answer	What it tests
Q5 — Shelf Choice (Choco Chip ₹960/mo vs. Cashew Badam ₹1,120/mo)	**B) Cashew Badam**	Volume bias — reps pick the hero SKU, not the margin winner
Q6 — Route Decision (Sharma ₹525/min vs. Ravi ₹72/min)	**B) Sharma Kirana**	Proximity bias — reps visit by distance, not value

Quick Reference (one-liner per answer)

- **Q1:** Revenue ₹1,600 − Cost ₹1,400 − Scheme ₹100 = ₹100 net → 6.25%
- **Q2:** 1 ÷ (10+1) = 9.09%
- **Q3:** 10% + 9.09% + 10% = 29.09%
- **Q4:** ₹150 extra margin for ₹800 push — only worth it if no extra discount needed
- **Q5:** ₹16 × 70 = ₹1,120 > ₹12 × 80 = ₹960
- **Q6:** ₹4,200 ÷ 8 = ₹525/min vs. ₹1,800 ÷ 25 = ₹72/min

The Urgent Need — In One Paragraph

Field salespeople make **75–200 margin computations a day** in their heads, under time pressure, with no tool. **60–90% of these computations are wrong** — not because reps are careless, but because the math is genuinely hard to do mentally. The errors compound: ₹45,000 per rep per month, ₹2.7 crore per year across a 50-rep force. **This is not a training problem. It's a tooling problem.** The widget doesn't make reps smarter — it makes the right answer *impossible to get wrong*, in 2 seconds, on the phone they're already holding.
